

EXIM HUB × JIVORA

Vision Execution Roadmap

Prototype Target: 15 July 2026

Our Commitment

Exim Hub is not building another marketplace.

We are building the operating system for global trade.

Our responsibility is to create a platform that importers and exporters genuinely enjoy using, where finding products, discovering suppliers, negotiating deals, managing documentation, and growing internationally feels effortless.

The platform must become smarter every day through AI while remaining transparent, ethical, scalable, and community-driven.

Our philosophy is simple:

Simple for users. Powerful underneath.

Jivora's Vision

Jivora aims to become a Fortune 500 company by redefining global trade through technology, trust, and ethics.

Rather than competing with traditional e-commerce platforms, Jivora is creating an intelligent global trade ecosystem specifically designed for importers, exporters, manufacturers, wholesalers, distributors, and international businesses.

Every decision must support four fundamental values:

- Ethical business practices
- Community-first growth
- AI-driven innovation
- World-class user experience

The objective is not to build another marketplace.

The objective is to build the future infrastructure of international trade.

Core Principles

Every decision during development must satisfy these principles.

1. Scalability First

We never write temporary code.

Every feature must be capable of serving:

- 100 users
- 10,000 users
- 100,000 users
- 1 Million+ users

without major architectural changes.

Every module should be designed for long-term growth.

2. Clean Architecture

Every module remains independent.

Examples include:

- Authentication
- Marketplace
- AI Engine
- Chat
- Documents

- Payments
- Shipping
- Analytics
- Notifications
- Admin Portal

Each service should evolve independently without affecting the others.

3. AI First

Artificial Intelligence is not an additional feature.

AI is integrated into every user journey.

Examples include:

- Product listing generation
 - Smart supplier matching
 - HS Code suggestions
 - Compliance assistance
 - RFQ drafting
 - Product recommendations
 - Trade document validation
 - Language translation
 - AI negotiation assistant
 - Market insights
-

4. Trust First

Trust is the most valuable feature.

Every screen should increase confidence between buyers and suppliers.

Examples:

- Verified companies
- Verification badges
- Business history
- Export experience
- Certifications
- Response rate

- Completion rate
 - Secure communication
-

5. Simplicity Above Everything

International trade is already complicated.

The platform should remove complexity rather than add to it.

Every action should require as few steps as possible while remaining intuitive and professional.

The Jivora Difference

Jivora is **not** another Amazon.

Amazon focuses on products.

Jivora focuses on businesses and long-term trade relationships.

Instead of encouraging quick purchases, Jivora enables businesses to:

- Discover trusted suppliers
- Build relationships
- Negotiate professionally
- Manage international trade
- Verify business credibility
- Complete documentation
- Expand globally with confidence

Jivora becomes the digital operating system for global commerce.

Product Vision

The platform should feel like a professional workspace instead of a shopping website.

Users should experience:

- Intelligent search
- AI recommendations
- Professional company profiles
- Modern communication tools
- Business networking
- Trade insights
- Seamless documentation
- Secure transactions

Every interaction should save time and increase trust.

Development Roadmap

Phase 1 – Research & Architecture

Objective

Understand complete international trade workflows before writing code.

Deliverables

- Import workflow
 - Export workflow
 - Buyer journey
 - Supplier journey
 - Admin workflow
 - AI workflow
 - System architecture
 - Database architecture
 - API architecture
 - Security architecture
-

Phase 2 – Design System

Develop a premium and reusable design system.

Deliverables:

- Brand colors
- Typography
- Icons
- Buttons
- Forms
- Tables
- Cards
- Navigation
- Dashboards
- Responsive layouts

Every screen should feel modern, premium, and enterprise-ready.

Phase 3 – Authentication

Develop secure authentication.

Features:

- Login
 - Registration
 - Company onboarding
 - Business verification
 - User profiles
 - Organization management
 - Role management
 - Multi-user companies
 - Session management
-

Phase 4 – Marketplace

Build an intelligent B2B marketplace.

Features:

- Categories
- Product catalog
- Company profiles
- Supplier profiles
- Smart filters

- AI-powered search
- Product pages
- RFQ creation
- Inquiry management
- Saved suppliers
- Saved products

The marketplace should prioritize business discovery instead of traditional shopping.

Phase 5 – AI Layer

AI should assist users throughout the platform.

AI Search

Users should be able to type naturally.

Example:

"I need a verified stainless steel supplier from Vietnam."

Instead of searching keywords, AI understands intent.

AI Product Assistant

Automatically creates:

- Product descriptions
 - Specifications
 - SEO content
 - Export-ready listings
-

AI Compliance Assistant

Checks:

- Missing information
- Export requirements
- Country-specific regulations

- Documentation completeness
-

AI Translator

Supports multilingual communication between businesses worldwide.

AI Chat Assistant

Available across every page.

Capabilities:

- Trade guidance
 - Platform assistance
 - Supplier recommendations
 - Documentation help
 - Product guidance
-

Prototype Scope (Target: 15 July 2026)

The prototype should demonstrate the complete vision rather than every feature.

Deliverables:

- Landing Page
- Authentication
- Dashboard
- Company Profile
- Product Listings
- Marketplace
- Search Experience
- RFQ Flow
- Chat Interface
- AI Assistant Demo
- Admin Dashboard
- Responsive Design

The prototype must communicate the future direction of Jivora.

Engineering Standards

Every developer must follow:

- Clean Code Principles
- SOLID Architecture
- TypeScript Best Practices
- Reusable Components
- API-First Development
- Modular Design
- Responsive Development
- Performance Optimization
- Security Best Practices
- Unit Testing
- Integration Testing
- Documentation
- Code Reviews

No shortcuts.

No unnecessary complexity.

Every line of code should be maintainable.

Daily Execution Plan

Morning Planning

Review:

- Previous day's work
- Open issues
- Development priorities
- Prototype goals

Create a focused plan for the day.

Development Session 1

Deliver one core feature.

Examples:

- Authentication
 - Dashboard
 - Marketplace
 - Search
 - Product Pages
-

Development Session 2

Improve existing code.

Tasks:

- Refactoring
 - Performance improvements
 - Component reuse
 - Bug fixes
-

Development Session 3

AI Integration

Daily objectives:

- Improve prompts
 - Enhance AI workflows
 - Optimize API usage
 - Improve recommendations
 - Expand AI capabilities
-

Development Session 4

Testing & Quality Assurance

Test:

- Mobile
- Desktop
- Tablet
- API responses
- Performance
- Security
- Edge cases

Fix issues before ending the day.

End-of-Day Deliverables

Every day concludes with:

- Working code committed
- Git updates
- Documentation updated
- Daily progress report
- Blockers identified
- Next-day priorities prepared

Nothing remains undocumented.

Recommended Technology Stack

Frontend

- Next.js
 - React
 - TypeScript
 - Tailwind CSS
 - Modern Component Library
-

Backend

- Node.js
 - NestJS
 - PostgreSQL
 - Redis
 - Prisma ORM
-

Infrastructure

- Docker
 - CI/CD Pipelines
 - Cloud Hosting
 - CDN
 - Object Storage
 - Monitoring
 - Logging
-

Artificial Intelligence

- Large Language Models (LLMs)
 - Retrieval-Augmented Generation (RAG)
 - Vector Database
 - OCR
 - Translation APIs
 - Document Intelligence
 - Semantic Search
-

Security

- JWT Authentication
 - OAuth
 - Role-Based Access Control (RBAC)
 - Encryption
 - Audit Logs
 - Rate Limiting
 - Secure File Storage
-

Future Modules

Following the prototype, Jivora will expand with:

- Smart Supplier Matching
 - Logistics Integration
 - Shipping Tracking
 - Trade Finance
 - Escrow Services
 - AI Negotiation Assistant
 - Customs Documentation
 - Compliance Automation
 - Digital Trade Passport
 - Global Business Networking
 - Learning Academy
 - Events & Exhibitions
 - Business Analytics
 - Mobile Applications
 - Partner APIs
 - CRM Integration
 - ERP Integration
-

Success Metrics

Success will be measured by:

- Fast onboarding
 - High trust between businesses
 - Reduced supplier discovery time
 - Higher RFQ conversion rates
 - Active business engagement
 - AI adoption
 - Platform performance
 - Customer satisfaction
 - International expansion readiness
-

Exim Hub Ownership Commitment

As Jivora's technology partner, Exim Hub works with an ownership mindset rather than a vendor mindset.

Our commitments are:

- Think like product owners.
 - Solve real import-export challenges.
 - Build for long-term scalability.
 - Prioritize maintainability over shortcuts.
 - Create reusable systems.
 - Communicate transparently.
 - Continuously improve based on user feedback.
 - Maintain high engineering standards.
 - Deliver secure, reliable, and well-documented software.
 - Align every feature with Jivora's long-term vision.
-

Prototype Milestone – 15 July 2026

By the prototype deadline, Jivora should be able to demonstrate:

- A premium landing experience
- Secure business onboarding
- Verified company profiles
- AI-powered product discovery
- Intelligent marketplace experience
- RFQ creation
- Real-time communication
- AI assistant integration
- Admin management tools
- A scalable technical architecture ready for future growth

The prototype is not the final product.

It is the foundation of a global trade platform capable of becoming the world's most trusted ecosystem for international commerce.

Final Commitment

Exim Hub's mission is to help Jivora become the world's most trusted AI-powered global trade platform.

We are not building software.

We are building the future infrastructure of ethical global commerce.

Every design decision, every architectural choice, every AI capability, and every line of code should move Jivora closer to becoming the operating system for intelligent, transparent, and scalable international trade.

Our success is measured not only by delivering features but by creating a platform that businesses around the world rely on to build lasting trade relationships, expand across borders, and grow with confidence.

Together, Exim Hub and Jivora will redefine how the world connects through trade.
