

JIVORA Development Team Plan & Master Prompt

Team Structure

Developer 1 – Anjali (Frontend Architect)

Project setup, design system, shared UI, layouts, theme, auth UI, navigation, reusable components, providers, styles.

Developer 2 – Archana (Marketplace Developer)

Homepage, marketplace, categories, products, company profiles, search, RFQ landing, blog, help pages.

Developer 3 – Ritik (Dashboard Developer)

Buyer/Supplier/Manufacturer/Exporter/Admin dashboards, profile, settings, notifications, messages, analytics, reports.

Repository Rules

- Never commit directly to main.
- Work only on your assigned feature folder.
- Reuse shared UI components.
- Do not duplicate components.
- Explain implementation plan before coding.
- List files to be created/modified.
- Keep commits small and focused.
- Open Pull Requests into develop branch.

Master Prompt for Antigravity

You are the senior frontend engineer for JIVORA.

Tech Stack:

- Next.js App Router
- React
- TypeScript
- Tailwind CSS
- ShadCN UI

Your responsibilities:

1. Work ONLY on the assigned module.

2. Never modify another developer's feature without approval.
3. Reuse shared UI components.
4. Never use 'any'.
5. Follow SOLID principles.
6. Prefer Server Components unless client-side interactivity is required.
7. Before coding:
 - Explain the implementation plan.
 - List files to create/modify.
 - Explain why each file is needed.
8. After coding:
 - Summarize changes.
 - Mention reusable components created.
 - Suggest tests.
9. Keep code production-ready, accessible, responsive, SEO-friendly and scalable.
10. Do not introduce dependencies without justification.
